

## Doublefacer Hot Plates

Upgrade

### Upgrade Application

Applicable to most doublefacers.

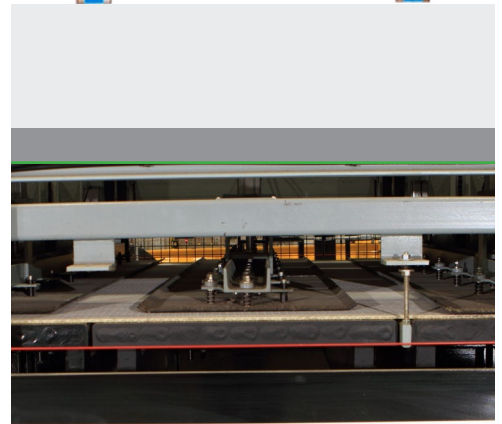

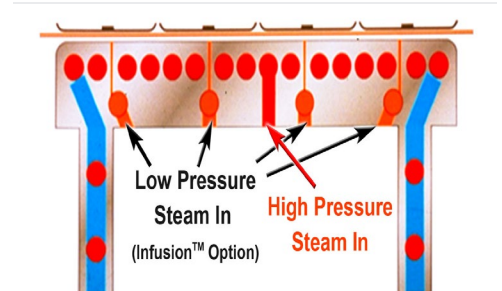

### Upgrade Description

Gun drilled hot plates replace existing hot plates to permit more effective heat transfer, while maintaining a higher surface temperature. This increased surface temperature minimizes plate deflection and edge crush. Board quality also improves from this temperature increase. MarquipWardUnited will provide standard 25 mm (1 in) steam inlet and outlet. Customer is responsible for steam piping and installation.

An Infusion-Capable hot plate option adds Infusion™ steam passages to provide even greater process control in the doublefacer.

### Upgrade Benefits

- More rapid transfer of heat to the running web
- Hotter plates allow faster run speeds
- Flatter hot plates reduces board crush
- Preserves liner moisture for improved warp control and reduced liner cracking
- Paper heating independent of web tension
- Improved warp control
